

ZERO TOUCH SERVERS

With the modern curriculum placing emphasis on the need for students to learn about digital technology and the latest trends, coupled with increasing pressure to provide more with less money, ICT can be complicated to coordinate and deliver.

You'll probably have heard lots about the "Cloud" but maybe you don't know how it can help you. Rather than using jargon, we've simplified what this actually means... which is why we call it "Zero Touch Servers". This technology simply means "copying" your servers in to our UK data centres – making them zero touch for you. After we've finished, you won't need to have any physical

THE BENEFITS

Data security – Staff and student data is secure, safe, backed up and it remains in the UK

Reliability – No need to worry about aging servers breaking down

Flexibility – Services to suit your school, college or university

Budget flexibility – Access to the latest technology with flexible subscription payment plans

CHOOSE US FOR...

UK data centre

We have UK-only data centres to keep your student data safe.

Peace of mind

Our data centres are built for resiliency. Even if one server goes completely offline (as unlikely as that may be!), your data is safe. In addition, backup comes as standard with all of our Zero Touch Servers.

Safety

All of our engineers are DBS cleared to protect your data and we are an ISO 27001 accredited company.

Augment your existing engineering skill

Just because your servers are zero touch, it doesn't mean your staff have to be too. Academia's Engineers can completely manage every element of your servers (including the operating system and configuration) as part of one of our Flexible Support Contracts, or your existing staff can be given access to the servers themselves... it's totally up to you.

Moving to Academia's Zero Touch Servers is easy. It doesn't matter what type of school, college or university you are, we can take you through the process step by step. Our team will provide a quotation and when you're ready to move, we'll do the rest.
